BUSINESS MANAGEMENT AND AIRLINE PILOT

AEROTOURS GmbH
Luftfahrtunternehmen D-374 AOC
Luftfahrerschule DE.ATO.074

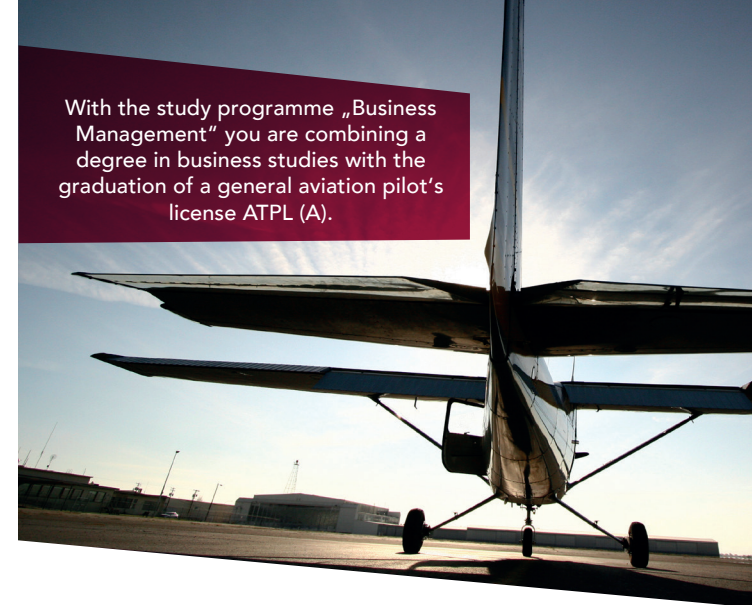

In global aviation, pilots are needed, who can not only use aviation know-how, but also understand social and economic contexts. Increasingly companies, such as airlines, are looking for personalities who are flexible, interesting and trustworthy, but who also act according to ethical principles and are socially responsible.

In a practical environment, you will learn to apply business management successfully, to plan and target management processes and to transfer this knowledge to companies – including aviation – and to develop practical problem solving solutions.

You will gain the ability to analyse and evaluate the industry through market opportunities and an economic context.

From the outset, your studies and course are designed to meet the requirements of a burgeoning pilot. Both theoretical and practical training courses have been approved by LBA & EASA. The course works in conjunction with our partners, AEROTOURS and Sky4U Berlin-Lichtenberg (theory), at Strausberg Airport (practical) and Berlin-Scönefeld Airport (practice) outside of the semesters and in dedicated time.

With the study programme „Business Management“ you are combining a degree in business studies with the graduation of a general aviation pilot's license ATPL (A).

| Semester 1 | Semester 2 | Semester 3 | Semester 4 | Semester 5 | Semester 6 | Semester 7 | Semester 8 |
